

## Extended Learning Supports

North Lake Students and Families,

As we approach the second half of the school year with all students starting three new classes beginning in February, we want to share resources with you that can be **optionally** used during the upcoming months.

Our goal in sharing these resources is to provide a layer of support for ongoing learning during the months you do not have specific content area classes. For example, if you will no longer have math starting in February, you can continue to review what you learned in the first half of this year to prepare for your math class starting in September 2021. The two sites below provide a variety of resources for review and practice.

The staff of cK-12 determined the basic essential learnings that must be mastered in selected secondary math courses in order to be prepared for the upcoming course. They included lessons, interactive activities and practice problems/answers for these essential learnings in short booklets called [Flexlets](#). The table below directs students to the correct Flexlet for our math courses:

Math Course Completed	Appropriate Flexlet
Sixth Grade	<a href="#">Prep for 7th Grade Math</a>
Seventh Grade	<a href="#">Prep for 8th Grade Math</a>
Eighth Grade and Pre-Algebra	<a href="#">Prep for High School Math</a>
Algebra 1	<a href="#">Review of Algebra</a>

[Khan Academy](#) provides a broad range of support for different learner levels and content areas, including **Arts and Humanities, Reading and Language Arts, Math, Science, and more**. Once on the site, click the [Courses drop down menu](#) in the upper left corner and select the appropriate course.

Contact your school if you have further questions about utilizing these resources. We're here to help you!
